Books

1. *Is Consciousness Everywhere? Essays on Panpsychism*, Alex Moran and I edited a special issue of the *Journal of Consciousness Studies* of 19 essays on the themes of my book *Galileo's Error*. Contributors include leading scientists (including Carlo Rovelli, Sean Carroll, Lee Smolin, Anil Seth, Christof Koch), philosophers and theologians. The editor has expressed interest in turning it into a book a year after publication. (2021)
2. *Galileo's Error: Foundations for a New Science of Consciousness*, Pantheon in US, Rider in UK. A Portuguese translation has been published (Temas e Debates), and there are forthcoming translations in Swedish (Fri Tanke) and Polish (PWN). (2019)
3. *Consciousness and Fundamental Reality*, Oxford University Press (2017)
4. *Monism in Spinoza*, (Ed.) Palgrave Macmillan (2011)
5. *Metaphysics: The Key Concepts* (with Helen Beebe and Nikk Effingham), Routledge (2010)

Praise for 'Consciousness and Fundamental Reality'

"This book contains some of the most important contributions to the metaphysics of consciousness in recent years. Philip Goff develops a sophisticated argument against materialism, and then explores the prospects for radical alternatives in considerable depth. He makes a strong case for panpsychism, the

thesis that consciousness exists at a fundamental level of physical reality, and extends this to a case for cosmopsychism, the thesis that the universe as a whole is conscious. Anyone interested in the philosophical problem of consciousness should pay close attention to his ideas."

--David Chalmers, New York University

"This book will quickly become a reference point for philosophical discussions of consciousness. Philip Goff lays out the issues with precision and cuts through to the heart of the latest philosophical technicalities. He also writes beautifully and advances a number of strikingly novel theses. No philosopher interested in consciousness can afford to ignore *Consciousness and Fundamental Reality*."

--David Papineau, King's College London and City University New York

"Goff has produced a grand piece of speculative metaphysics, in the tradition of Leibniz, Spinoza and Unger. It is also probably the best single piece of work emerging from the recent bloom of interest in Russellian monist views of consciousness. Starting with plausible and well-defended premises, he argues for a daring conclusion that many will find difficult to accept; yet, he makes a compelling case that there is no easy way to resist it. Figuring out how to respond to his rigorous and thorough arguments will be highly instructive (and fun!) for anyone with an interest in metaphysically-oriented philosophy of mind."

--Geoffrey Lee, University of California, Berkeley

"In an era of increasing specialization and "small ball" philosophy, Philip Goff's *Consciousness and Fundamental Reality* comes as a welcome antidote. He defends a grand metaphysical vision of the world, constitutive cosmopsychism, according to which the universe as a whole is conscious, and everything else is grounded in its evolving conscious state. Yes, this view is revisionary. But all views on the mind-body problem are revisionary – including orthodox physicalism. Goff develops a number of powerful arguments against the alternatives as well as a positive case for his cosmopsychism. His discussion demands – and will repay – our close attention."

--Adam Pautz, Brown University
